NAME:YUDISH VENKAT V **ROLL NO.:** 241901509

EXPERIMENT- 05: View Last Activity of Your PC Using LastActivityView

AIM:

To examine recent user activities and system events on a Windows computer using LastActivityView and identify available activity timestamps.

REQUIREMENTS:

1. Windows computer
2. LastActivityView utility
3. Administrative privileges, if required

PROCEDURE:

Step 1: Download LastActivityView

1. Visit the official NirSoft website: https://www.nirsoft.net/utils/computer_activity_view.html
2. Download LastActivityView from its official utility page.
3. Extract the downloaded ZIP file.
4. Run LastActivityView.exe.

Step 2: View Activity Records

1. Launch LastActivityView.
2. Allow the utility to collect and display available activity records.
3. Review the activity description, filename, full path, and event time where available.

Step 3: Examine User and System Activities

1. Inspect the available records for:
2. Application execution
3. File and folder activity
4. Software installation or removal
5. USB device connections
6. Browser-related activity
7. Other supported Windows events

The records depend on the data sources available on the computer. Not every activity type will necessarily be present.

Step 4: Identify the Last Recorded Activity

1. Locate the Event Time or corresponding timestamp column.
2. Sort the records by time, if supported.
3. Identify the most recent relevant event.
4. Note its description, associated file or application, and timestamp.
5. Use the search or filtering options to examine a specific event or time range.

Step 5: Save and Document the Findings

1. Select the relevant activity records.
2. Use the available save or export option to create a report.
3. Record the event description and timestamp in the observation table.
4. Capture a screenshot showing the relevant entries.

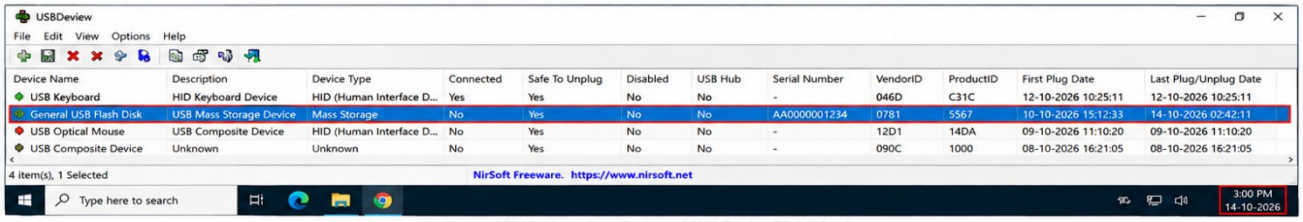

Figure 5: USBeview – Last Connected USB Device (Highlighted)

RESULT:

1. LastActivityView successfully captured a detailed log of user and system actions.
2. The chronological event log supported reconstructing user behavior on the PC.
3. This information aids forensic investigators in timeline analysis and identifying actions relevant to investigations.
